Jocelyn Bell Burnell inadvertently discovered pulsars as a graduate student in radio
astronomy in Cambridge, opening up a new branch of astrophysics - work recognized
by the award of a Nobel Prize to her supervisor.

She has subsequently worked in many roles in many branches of astronomy, working
part-time while raising a family. She is now a Visiting Academic in Oxford. She has been
President of the UK’s Royal Astronomical Society, in 2008 became the first female
President of the Institute of Physics for the UK and Ireland, and in 2014 the first female
President of the Royal Society of Edinburgh. She was one of the small group of women
scientists that set up the Athena SWAN scheme.

She has received many honors, including a $3M Breakthrough Prize in 2018.
The public appreciation and understanding of science have always been important to
her, and she is much in demand as a speaker and broadcaster. In her spare time, she
gardens, listens to choral music and is active in the Quakers. She has co-edited an
anthology of poetry with an astronomical theme – ‘Dark Matter; Poems of Space’.
