

Dear K-12 Attendee,

We are pleased you have decided to spend your time learning with us at an American Association of Physics Teachers national meeting. You are a valued member of our community, and we cannot wait to meet you. AAPT is a member organization of physics educators at all levels of education. Our K-12 members make up about one third of our membership. AAPT hosts a summer and winter meeting in various locations around the United States.

When you arrive at the meeting, you will begin your experience at the registration desk where you will get a badge and other information about the meeting. Be sure to grab a "K-12 Educator" ribbon or sticker to add onto your badge and help you connect with other K-12 educators. Additionally you should find a suggested schedule highlighting sessions on K-12 Teacher day that are designed for K-12 educators and a schedule for the K-12 Lounge. The K-12 Lounge is a room to relax and spend time with your K-12 colleagues at the meeting. All programming in the K-12 Lounge is specifically for you as a K-12 educator.

You are also invited to attend any of the community meetings, but we especially want to highlight the Physics in High Schools community since it specifically serve K-12 educators. AAPT is a member driven organization and part of that is a community structure. Communities are groups of members with special interests, like K-12 Teaching. Communities drive actions and interests of the members they represent. Attending the community meeting is a great way to find out what a community is up to and how you can get involved!

If you have any questions before, during or after the meeting, please feel free to reach out to us!
